

>> The introduction of high definition television (HDTV) has been hailed as the biggest thing to happen in TV broadcasting since the change from black and white to colour.

>> You'll notice a huge difference with high definition TVs displaying up to 4 times the quality of current analogue and digital broadcasts.

>> The level of detail is astonishing with clearer, sharper and more vibrant images. Why not visit our shop for a demonstration.

A TV may be labelled 'HD ready' if it meets the following criteria:

- It must have a minimum resolution of 720 lines in wide aspect ratio.
- It must support both 720p and 1080i formats
- It must have a HDMI (High Definition Multimedia Interface) or DVI (Digital Video Interface) input
- It must be compatible with analogue HD sources (e.g. camcorders)
