

Marantz Seductive. Involving. Lush.

These are some of the words used to describe the image projected by our newest video projector, the VP-11S1. A few moments spent looking at the picture are all it takes.

Realistic. Amazing. Fantastic.

Using the newest technology available from Texas Instruments, the VP-11S1 more than doubles the onscreen pixel count yielding the highest available resolution of all Home Theater devices on the market.

Seamless. Smooth. Filmlike.

With over 2 megapixels displayed (1920 x 1080), this projector has been five years in development.
